🏠 <https://gdetor.github.io>

Summary of Qualification

- Eleven years of **research experience** in scientific laboratories of various disciplines such as **computational neuroscience, machine learning, neuromorphic computing, control theory, and robotics**. Three years of experience in **industrial applications of machine learning, time series analysis, and natural language processing**.
- Strong **abilities** in combining and bridging different fields such as **machine learning, neuroscience, computer science** and **mathematics**.
- **Strong mathematical skills**, especially in linear algebra, dynamical systems, signal processing, control theory, and numerical simulations.
- **Long experience in programming** in system and scripting languages.

Professional Experience

Machine Learning Engineer

Independent Contractor | Irvine (CA), USA

December 2020 - Today

- Develop machine learning algorithms with applications on time series analysis and forecasting.
- Deploy time series forecasting machine learning algorithms.

Data Science Architect

[adNomus](#) | San Jose (CA), USA

August 2019–December 2020

- Developed NLP algorithms with applications in context analysis.
- Analyzed behavioral data.
- Used machine and deep learning algorithms for time-series prediction.

Python Instructor | [CentraleSupélec](#) | Gif-sur-Yvette, France

March 2014–April 2014

- Taught a course on the Python Programming Language.

Research Experience

Postdoc Researcher in Neuromorphic Computing and Machine Learning

UCI | Irvine (CA), USA

January 2016–July 2019

[Neuromorphic Machine Intelligence Lab](#)

- Research in stochastic deep neural networks.
- Developed a neuromorphic framework (<https://github.com/nmi-lab/NSAT>).
- Developed machine learning algorithms for neuromorphic devices.
- Co-developed algorithms for Brain-Machine Interface using machine learning and neuromorphic devices.
- Integrated neuromorphic sensors (DVS camera) with neuromorphic frameworks.

Postdoc Researcher in Neuroscience and Control Theory

[CentraleSupélec](#) | Gif-sur-Yvette, France

December 2013–December 2015

[Laboratoire des signaux et systèmes](#)

- Developed a mathematical model (neural fields with time delays) and a closed-loop simulation for Parkinson's disease treatment.
- Conducted theoretical work on non-linear retarded dynamical systems in a closed-loop setup.
- Co-developed software for spike-sorting (<https://github.com/gdetor/SPySort>).
- Developed Matlab software for on-line data processing on a Plexon recording device.

Research Assistant in Computational Neuroscience

[INRIA-Nancy Grand Est](#) | Nancy, France

October 2010–October 2013

CORTEX Team

- Developed algorithms for self-organizing maps.
- Developed a mathematical model for the development of the somatosensory cortex.
- Studied attention mechanisms in the somatosensory cortex.
- Reproduced an *in vivo* experiment *in silico* to study self-organization in the brain.

Research Intern in Robotics

FORTH | Heraklion, Greece

May 2008–October 2008

Computational Vision and Robotics Laboratory

- Configuration and calibration of a HOAP3 humanoid robot.
- Applied biped locomotion algorithms on a HOAP3 robotic platform.

Research Intern in Systems Neuroscience

University of Crete | Heraklion, Greece

October 2007–April 2008

Laboratory of Systems Physiology and Computational Neuroscience

- Conducted EMG and EEG experiments for studying human tremor.
- EMG and EEG recordings, data processing and analysis.
- Software development for signal processing.
- Computational simulations of motor units.

Education**INRIA Nancy Grand-Est/The University of Lorraine**, Nancy, France**Ph.D. in Computer Science**,

October 2010–October 2013

- Thesis Topic: *Cortical plasticity, dynamic neural fields, and self-organization*.
- Area of Study: Computational Neuroscience.

The University of Crete, Heraklion, Greece**M.Sc. in “Brain & Mind Sciences”**

January 2007–January 2009

B.Sc. in Applied Mathematics

September 2002–September 2006

- Mathematical methods and software development track.

Communication Skills**Languages:**

- Greek-native language,
- English-full professional proficiency,
- French-intermediate working proficiency,
- German-elementary proficiency.

Software Skills**Programming:**

- C, C++, Python, Rust, Fortran, Java, Pascal, UNIX shell scripting, GNU make, SQL, HTML.
- CSS, Bootstrap.
- Matlab/Octave, Maple.
- Scikit-learn, LAPACK/BLAS, Sundials, OpenMP, OpenCV, Nvidia CUDA, MPI, FEniCS.

Deep Learning Frameworks:

- PyTorch, TensorFlow.

Natural Language Processing Frameworks:

- spaCy.

Simulators:

- Brian, Neuron (Python).

Version Control and Software Configuration Management:

- Git and SVN.

Devops:

- Gitlab CI/CD configuration.

Desktop Editing and Productivity Software:

- Vim, T_EX (L^AT_EX, BibT_EX, Tikz), Microsoft Office, Graphviz, GIMP, Inkscape, Scribus.

Operating Systems:

- Linux and BSD, Microsoft Windows family, Apple OS X.

Expertise

Mathematics:

- Linear and Nonlinear Dynamical Systems, Control Theory, Numerical Analysis, Numerical Solutions of PDEs, Linear Algebra, Probability Theory, Theory of Systems and Signals, Information Theory, Optimization, and Empirical Dynamic Modeling (EDM).

Computer Science:

- Deep Learning, Machine Learning, Natural Language Processing, Neural Networks, Neuromorphic Computing, Software Development, Evolutionary Computing, Theory of Algorithms, and Topological Data Analysis (TDA).

Neuroscience:

- Systems Neuroscience, Computational Neuroscience, Cognitive Science.

Software

Major contributor in open source projects

- **GAIM** A C++ library for Genetic Algorithms and Island Models.
Gitlab link: https://gitlab.com/gdetor/genetic_alg.
- **NSAT** A C/Python simulator for the Neural and Synaptic Array Transceiver (NSAT) neuromorphic framework.
Github link: <https://github.com/nmi-lab/NSAT>.
- **NSATcarl** A C++ interface of CARLsim (<http://www.socsci.uci.edu/~jkrichma/CARLsim/>) for the NSAT neuromorphic framework.
Github link: <https://github.com/gdetor/CarlNsat>.
- **SPySort** A Python package for spike sorting.
Github link: <https://github.com/gdetor/spysort>.

Recording Techniques

Noninvasive:

- Electroencephalography (EEG) – Conducted EEG recordings using an 18-electrodes portable EEG device.

Invasive:

- Extracellular recordings – Set up, calibration and software development on a Plexon Recording Device.
- Electromyography (EMG) – Conducted muscle force and motor units (MUs) activity recordings.

Talks

- **Biologically plausible contrastive divergence: Towards an abstract complementary learning system**, Hughes Research Laboratory (HRL), Malibu CA (USA), 2017.
- **Closed-loop deep brain stimulation for Parkinson's disease: A computational study**, University of California Irvine, Irvine CA (USA), 2016.
- **Neural Fields 101**, CentraleSupélec, Gif-sur-Yvette (France), 2015.
- **The perception of touch: A computational approach**, Aix Marseille University, Marseille (France), 2014.
